35% of waste from La Samaritaine site carried on the Seine

Vinci Construction France has chosen the river solution of Paprec Recyclage and CRH-Raboni to transport industrial waste from La Samaritaine's 36-month-long construction project in the heart of Paris. This means 3.5 times fewer kilometres travelled by lorries to remove the waste from the former department store, which Paprec estimates will increase to 85%. The site will generate 110,000 tons of debris of all kinds, 35% of which will be transported via the Seine.
